EXPERIMENT

Title

CLEAN STRING

Description

You are given two strings A and B. Your task is to find and return a string representing the leftover string in A after removing all the letters that exist in string B. Return "Empty" if the output does not contain any value.

Note:

Strings A and B contains alphabets in upper case only.

A single alphabet in B can replace all the occurrences of that alphabet in A.

Input Specification:

Input1: A string A

Input2: A string B

Output Specification:

Return a string representing the leftover string in A after removing all the letters that exist in string B

Example:

Sample Input:

ABCDEF

ACE

Sample Output:

BDF

Source Code:

```
a=input().upper()
b=input().upper()
r=""
for i in a:
    if i not in b:
        r+=i
if r:
    print(r)
else:
    print("Empty")
```

RESULT

4 / 5 Test Cases Passed | 80 %
